Bringing Informatics to the Point of Use!

Access your data anywhere, anytime

## DIGITAL CLINIC™

Is a comprehensive point-of-care patient information management system that uses mobile devices such as Tablet PCs with Pen-and-paper-like interface for capturing patients' charts and all associated information.

Major features of Digital Clinic™ are:

- Access information from anywhere at anytime
- Allows you to work on your patient information offline.
- CMS-compliant; Superbills generation
- Self-Service Check-in using Smart Cards
- Keep track of patients, staff and facility from the time patients check-in until check-out

- Comprehensive Vital Signs analysis and plotting
- Automated Standing Order notification and management
- Encounters' Template designer for maximum flexibility and rapid charting
- Report Designer for easily creating custom reports
- Medical team collaboration via built-in messaging system
- Secure and confidential environment based on staff roles and privileges
- Appointment scheduling system to gain control of schedules
- Configurable and customizable to meet staff's processes, profiles and preferences
- Total mobility utilizing wireless and wired network
- Web browsing for research, e.g. drug interaction, from your mobile touch-screen device
- Prescriptions ordering from point-of-encounter
- Comprehensive database for patient information
- HL7/ Data exchange automation to/from other systems

## HEALTH CARE

The way in which healthcare is currently being delivered is expected to change dramatically in coming years. Physicians are now facing the task of keeping track of fee-for-service and captivated contracts, as well as the pressure to reduce costs and improve quality of patient services.

**The average practice touches paper 22 times to complete the entire patient service process for a single encounter.**

The administrative burden on practices is growing and is becoming more complicated. It has been conservatively estimated that from the scheduling clerk to the provider, **50 – 70% of staff time is spent searching for information or recording information.**

## EXISTING STATE OF PATIENT CARE

Although many healthcare providers are automating their accounting and scheduling systems, the automation of a management system for patients' information is inconsequential.

The major reasons for paper-based patient record management are:

- ❑ Bulky wired PCs that must be located in every exam room
- ❑ Difficult to use systems
- ❑ Expensive, yet lacking many needed features or require additional cost for added features.

## BENEFITS OF DIGITAL CLINIC™

Both providers and patients can benefit from reduced overhead as a result of the administrative simplification and better quality of service provided by Digital Clinic™ that is traditionally handled manually.

## Digital Clinic™

- ❑ Will lessen time spent collecting, recording, documenting, and searching for patients' information
- ❑ Provides intuitive and easy to use interface
- ❑ Increases the quality of patient care as a result of the reduction of staff administrative tasks
- ❑ Will improve billing revenue by more accurately documenting each patient's encounter
- ❑ Is a cost effective system with a high return on your investment (ROI)
